

Sanitation Complete

A single cohesive solution to systematically automate and monitor your entire Sanitation Program

The Novolyze Sanitation Complete Solution offers a holistic approach to sanitation control through digitalization, encompassing all core areas of your sanitation program.

Benefits

- | Reduce time and manual data input
- | Ensure compliance
- | Align sanitation practices across the enterprise
- | Optimize sanitation practices for chemicals, water and utilities
- | Prevent risks and reduce unplanned plant downtimes

Are your sanitation programs effective and optimized across your plants?

Sanitation programs are complex due to the number and variety of teams involved, and types of activities, from cleaning processes (CIP/COP, etc.) to inspections and environmental monitoring. These activities generate a large amount of data coming from various sources, including manual entries that are time consuming and prone to errors, excel files, internal or 3rd party lab results, etc. The heterogeneity of your data makes it difficult to identify deviations in real time, to analyze and compare results from different time periods or between your sites and to implement an effective CAPA management program. In most cases, food safety & quality teams have a static vision of the effectiveness of their sanitation activities and have little visibility on the performance of their processes and the opportunities for improvement.

It's time for a new approach

Novolyze Sanitation Complete solution digitalizes your Master Sanitation Program including environmental monitoring, Master Sanitation Schedule and supporting SSOPs, task monitoring, e-forms, CAPA management and validation. By harmonizing the data globally, your organization can easily measure the performance of its cleaning and sanitation programs and teams, including 3rd party sanitation crews, against your Food Safety Plan objectives and track and investigate deviations to uncover underperformance. With this dynamic approach to sanitation control, your enterprise can holistically manage and optimize your Sanitation Program reducing downtime, labor and chemical cost while ensuring cleaning efficiency. Corporate dashboards and customizable KPI provide a real time snapshot of your Sanitation Program across sites to learn best practices and uphold uniform standards.

Key features

Workflow Optimization

Organize your plants' sanitation workflow into consistent steps that are highly repeatable by all users.

Versatile Digital Quality Forms

Digital Quality Forms with data validation at time of entry to improve consistency and reduce common data collection errors.

Master Sanitation Schedule

Schedule all your Sanitation program tasks, assign them to individuals or groups, and get a quick view of complete, pending, and non-compliant events.

Integrated Sanitation Calendar

A modern digital calendar with day, week, and month views to help you visualize and coordinate your sanitation activities.

SSOP Library

A digital library for all your SSOPs (Sanitation Standard Operating Procedures), correlated and connected to specific workflows, tasks, and forms.

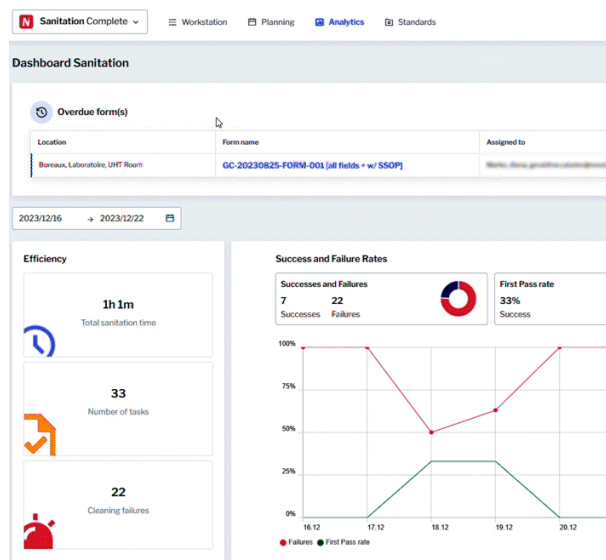

Dashboards

Dynamic dashboards for a centralized and optimized visualization of your Sanitation Program.

A focus on Food Safety Compliance that increases OEE

Novolyze Sanitation Complete digitalizes your sanitation details into an easy to use interface. The solution includes an Outlook-like calendar to visualize your schedule, a digital SSOP library, Master Sanitation Schedule, guided workflows, and other functionality, all in one place. A dashboard lets you drill into the most important actions to get your production line back in service quickly. A growing set of analytics depicts the efficiency of sanitation work, including success and failure rates. Versatile digital Quality Forms are embedded in the solution to assist you in rapid and consistent data collection through live data validation and required fields.

About Novolyze

Founded in 2012, Novolyze empowers food and beverage companies to enhance food safety and quality performance through digitalization. The company was created with the ambition to invent a novel way to envision food safety and quality, which relies less on finished product testing and leads to superior positive impacts in environmental sustainability, yield, and production.

Over 20 of the world's top 100 food companies now use a Novolyze solution or product to help mitigate risks, ensure compliance, augment plant performance, and increase sustainability.
